

Pervasive Business Intelligence

By

ORACLE

Capital, Machines, People and Information

The four (4) production media of our modern Enterprises !!

Business Intelligence directly impacts the potential of two (2) of these production media. You may understand that using appropriate tools to support these production factors will have a direct impact on the Success and Performance of your organisation.

But how can you make sure you make the appropriate choice: reasonable price, open and scalable technology, large functionalities, financially strong supplier ?

You are looking for a complete, integrated Business Intelligence (BI) and data warehousing system, packaged, pre-configured and priced to meet your needs ?

Do have a closer look at the

Oracle Business Intelligence Solutions !

Pricing and Availability

You may start with Oracle Business Intelligence SE One.

This pre-packaged solution is generally available for the Microsoft Windows platform and is priced at around 800 euros per named user (with a minimum of five users, maximum of 50 users).

Growing beyond 50 users will be possible without technology disruption. You will scale up to the Oracle Business Intelligence Suite Enterprise Edition.

Approach

"Oracle Business Intelligence SE One is **the only end-to-end BI and data warehousing solution** that is based on category-leading technology for every component, offering a complete and compelling solution at an attractive price," said Paul Rodwick, Oracle VP Business Intelligence.

"The software offers small to medium sized organizations a proper infrastructure that will serve their immediate BI needs, yet easily scale and grow with their needs over time."

Oracle Business Intelligence SE One offers customers the right BI foundation to deliver complete, relevant, and timely information for better decision-making across the organization.

Built on enterprise-class software: Oracle Business Intelligence Suite Enterprise Edition (EE) and Oracle Database, Oracle Business Intelligence SE One offers customers breadth and flexibility in addressing their BI needs, from simple operational reporting to a fully featured role-based dashboard, analysis, and data warehousing system.

Oracle enables emerging enterprises and organizations to upgrade to enterprise versions of the BI and database software to support increased BI functionality and larger numbers of BI users without the need to re-implement analytic content.

Oracle BI Solutions are available from the Oracle Partners Network.

If you want to know more about their applicable terms, conditions, and restrictions take contact with an Oracle Partner dedicated to BI.

F.IT-C is one of them dedicated to Business Intelligence and Data Integration.

You start a departmental project with Oracle BI Standard Edition One, you may install it on a machine with up to two CPUs (multi-core), and it can serve from 5 to 50 users.

You scale up whenever necessary to higher software configuration without any technology disruption.

The following products are integrated and comprise Oracle Business Intelligence SE One:

Oracle Business Intelligence Server -

A unified infrastructure that supports all the Oracle Business Intelligence SE One end user tools, the Oracle Business Intelligence Server delivers high performance data access, integration, and calculations across Oracle and non-Oracle sources, and presents end users a single, logical view of business data;

Oracle Business Intelligence Interactive Dashboards -

provides a personalized, live, interactive Web dashboard of key trends, alerts, Key Performance Indicators (KPIs), including visualizations such as gauges, charts, summary reports, and condition-based guided analytics;

Oracle Business Intelligence Publisher -

enables organizations to produce a wide array of documents and reports such as financial statements, high-fidelity reports, invoices, labels, and more, using a variety of familiar applications for layout such as Adobe Acrobat and Microsoft Word;

Oracle Business Intelligence Answers -

An ad hoc reporting and analysis tool that enables end users to quickly build, analyze, visualize, drill and embed reports into dashboards;

Oracle Database 10g Standard Edition One -

the world's leading database is included to serve as the foundation of a robust data warehouse, allowing customers to take advantage of the proven manageability, performance, reliability and security for which Oracle Database is renowned,

Oracle Warehouse Builder -

a leading extract, transform and load (ETL) tool provides data quality, data auditing, fully integrated relational and dimensional modeling and full life cycle management of data and metadata to help organizations construct and maintain an efficient, high quality data warehouse. With OWB, you will be able to source Data from multiple and heterogeneous technologies.

Ease of Use

Oracle Business Intelligence SE One was developed with business user self-sufficiency in mind; featuring business user interfaces that do not require coding, SQL or other technical skills.

Report layout and design is conducted with everyday tools like Microsoft Word and Adobe Acrobat; new interactive dashboards are built through a simple, drag and drop Web interface; and new ad hoc analyses are built by pointing and clicking on items from a simplified, logical business model of the data.

These ease-of-use capabilities enable greater business value and reduced reliance on IT for reporting and analysis needs.
